- created by *Linus Torvalds* in 2005

# Git : Course Materials

- created by *Linus Torvalds* in 2005
- distributed version control : each directory as a full-fledged repo

# Git : Course Materials

- created by *Linus Torvalds* in 2005
- distributed version control : each directory as a full-fledged repo
- used for changes tracking and work coordination among collaborators

# Git : Course Materials

- created by *Linus Torvalds* in 2005
- distributed version control : each directory as a full-fledged repo
- used for changes tracking and work coordination among collaborators

## Example

```
$ cd ~/SE_data
$ ls -a
.  ..  exercise  .git  lectures  README.md
```

# Git : Course Materials

- created by *Linus Torvalds* in 2005
- distributed version control : each directory as a full-fledged repo
- used for changes tracking and work coordination among collaborators

## Example

```
$ cd ~/SE_data
$ ls -a
.  ..  exercise  .git  lectures  README.md
```

## Basic Practice

- only the first time

```
$ cd ; git clone https://github.com/selvaje/SE_data
# (source copy, no work inside here)

$ cp -r ~/SE_data /media/sf_LVM_Shared/my_SE_data
# (working copy for yourself, taking notes, etc.)
```

## Basic Practice

- routine after the first time

```
$ cd ~/SE_data
```

```
$ git pull # (sync. w/ cloud)
```

```
$ rsync -hvrPt --ignore-existing ~/SE_data/* \  
    /media/sf_LVM_Shared/my_SE_data  
#(sync. only new files)
```

```
$ cd /media/sf_LVM_Shared/my_SE_data # (work here)
```

- Common practice to separate source and working copies
- **Important** : NOT working in the source copy

# Git : Full Setting

- git repo setup
- good for professional development
- easy for collaboration

# Git : Full Setting

- git repo setup
- good for professional development
- easy for collaboration

## Initialisation

```
$ mkdir my_Project ; cd my_Project
```

```
$ git config --global user.name "your name"
```

```
$ git config --global user.email "your email"
```

```
$ git init
```

```
Initialized empty Git repository in ...
```

```
$ ls -a
```

```
.  ..  .git
```

## Add files

```
$ touch README.md
```

```
$ git status
```

Untracked files:

(use "git add <file>..." to include in what will be committed)

README.md

```
$ git add README.md ; git status
```

Changes to be committed:

(use "git rm --cached <file>..." to unstage)

new file: README.md

```
$ git commit -m "added README" ; git status
```

nothing to commit, working tree clean

# Git : Full Setting

## Modify file contents

```
$ echo -e "Project for GeoComput&ML \n" > README.md
$ git status
(use "git add <file>..." to update what will be committed)
modified:   README.md

$ git add README.md ; git commit -m "modified README"
[master 002362a] modified README
1 file changed, 2 insertions(+)
$ git status
nothing to commit, working tree clean
```

# Git : Full Setting

## Modify file contents

```
$ echo -e "Project for GeoComput&ML \n" > README.md
$ git status
(use "git add <file>..." to update what will be committed)
modified:   README.md

$ git add README.md ; git commit -m "modified README"
[master 002362a] modified README
1 file changed, 2 insertions(+)
$ git status
nothing to commit, working tree clean
```

## Move or remove files

```
$ git mv <old file> <new file>
$ git rm <filename>
remember to commit after mv or rm actions
```

## Link repo to GitHub

create a GitHub account

create a repo on GitHub

follow the instructions on the GitHub setup page

```
$ git remote add origin git@github.com:/your/project
```

```
$ git push -u origin master
```

# Git : Full Setting

## Link repo to GitHub

create a GitHub account

create a repo on GitHub

follow the instructions on the GitHub setup page

```
$ git remote add origin git@github.com:/your/project
```

```
$ git push -u origin master
```

## Sync. w/ GitHub

```
$ git pull # download
```

```
$ git push # upload
```

ref : Git version control training

# Git vs SVN

Git : Distributed version control

- no single central version of the codebase
- each working copy containing the full change history

main features

- faster committing
- each copy as a backup copy
- supporting private work
